

Prototyping - Robot dog

A. Prototype

1. Which features or functionalities does this prototype represent? 2. - voice controlled 3. - AI - chat-bot 4. Mobile, walk around itself, follow its owner around 5. Able to nudge and poke to get attention. 6. Cute and kind looking 7. Calendar and contacts function 8. Communication platform - able to receive and make calls and messages through the speaker on the dog. 9. Able to connect with other peers in the surrounding area for a coffee or a chat or similar. 10. Connect with other people with RoboDogs. 11. Safety feature checking in-coming calls for signs of fraud. 12. Basic health checks (ability to call for help if owner is unconscious or confused or asking for help) 13. Safe. Must adapt to the owner's physical abilities.
14. What do you want to learn or evaluate with this prototype? 1. How do people feel about having a robot dog walking around in their apartment? How quickly do they get used to it. 2. How easy is it to communicate through the robot dog. 3. How important is the physical appearance of the dog. 4. How does the dog adapt to the user while still poking and nudging. 5. What limitations to the AI-function are important to ensure safety?
15. Which parts of the prototype are you least certain about or have the most open questions regarding? The physical features of the dog. Should the same speaker be used for communication with the dog as with external parties?
16. Briefly explain the key interface design decisions you made.

- Dogs are man's oldest companions. It is natural that a dog moves around. That is why we chose the shape of a dog.
